

Contents

Chapter 1 Introduction

Introduction to File Processing	1
Limitations of Flat File Processing Systems	2
Database Approach	4
History of Database	4
Database and Database Management System	5
DBMS vs File System	7
Advantages of Modern Database Systems or Purpose of Database System	8
Disadvantages of Modern Database Systems	9
View of Data/Data Abstraction	9
Data Models	12
Object Based Data Model	13
Record Based Data Model	14
Database Languages	16
Data-Definition Language	16
Data - Manipulation Language	17
Database Users and Administrators	17
Database Administrator	18
Transaction Management	19
Transaction Concept	19
Database System Structure	22
Storage Manager	23
The Query Processor	23
Centralized and Client Server Architecture	24
Centralized Dbms Architecture	24
Client Server Architecture	24
Types of Client Server Architecture	25
<i>Points to Review</i>	26
<i>Exercises</i>	27

Entity Relationship Model

Introduction	28
Basic Concepts	29
Entity and Entity Sets	29
Attributes	30
Types of Attributes	30
Relationship and Relationship Sets	32
Degree of Relationship Type	32
Role Names and Recursive Relationships	33
Constraints on Relationship Types	33
Mapping Cardinalities	33
Participation Constraints	35
Attributes of Relationship Types	36
Keys	37
Keys in Entity Sets	37
Keys on Relationship Sets	38
Design Issue	39
Entity versus Attribute	39
Entity versus Relationship	41
Binary versus Ternary Relationships	42
Weak and Strong Entity Sets	43
Obtaining Primary Key of a Weak Entity Set	44
Notations for ER Diagrams	45
Design Choice for Conceptual Design	47
Enhanced/ Extended Entity Relationship	47
Subclasses, Superclasses, and Inheritance	48
Specialization	48
Generalization	50
Constraints on Specialization and Generalization	51
Specialization and Generalization Hierarchies and Lattices	55
Aggregation	57
Design of ER-Database Schema	57
Design Phases	58
Database Design for a Company Database	58
Data Requirements	58
Entity Set Designation	59
Relationships	59
ER-Diagram	60

Reduction of an E-R Schema to Tables	60
Tabular representation of strong entity sets	60
Tabular Representation of Weak Entities	61
Tabular Representation of Relationship Sets	61
Redundancy of Tables	62
Composite Attributes	63
Multivalued Attributes	63
Tabular Representation of Generalization	63
Tabular Representation of Aggregation	64
<i>Points to Review</i>	65
<i>Exercises</i>	66

Chapter 3

Relational Model

Introduction	69
Basic Structure	69
Database Schema	71
Keys	73
Schema Diagram	75
Query Languages	76
Relational Algebra	76
Selection	77
Projection	79
Set Union	80
Intersection	82
Difference	83
Cartesian Product	84
Join	86
Natural Join	86
The Rename Operation	88
The Assignment Operation	88
The Division Operation	89
Extended Relational-Algebra Operation	91
Generalized Projection	91
Aggregate Functions	91
Outer Join	92
Modification of the Database	95
Deletion	95
Insertion	95
Updating	95

Views	96
View definition	96
Updates through views and null values	97
Views defined by using other views	97
<i>Points to Review</i>	97
<i>Exercises</i>	98

Chapter 4 **SQL - Structure Query Language**

Introduction	101
Basic Structure	103
Combining Conditions and Boolean Operators	106
Removing Duplicates	106
Range Specification (In And Between)	107
Ordering The Display of Tuples	110
String Operations	111
Aggregate Functions	112
Group By	113
Having	114
Null Values	115
SQL Alias	116
Joining Relations	117
Review Exercises	120
Outer Joins	121
Self Joins	121
Subqueries	122
Review Exercises	124
Set Operations	125
SQL Union	125
SQL Intersect	126
SQL Minus	127
Test for Empty Relations	128
Test for the Absence of Duplicates Tables	129
Complex Queries	130
Derived Relations	130
The With Clause	131
Data - Definition Language	132
Domain Types in SQL	132
Schema Definition in SQL	133

Modifying Table and Column Definitions	136
Drop Table	137
Truncate Table	138
Modification of the Database	138
Insertions	138
Updates	139
Deletion	141
Views	142
SQL-Transaction Statements	143
Transaction Overview	144
Transaction Isolation	144
Commit Statement	145
Rollback Statement	145
SQL vs Relational Algebra	145
Sample Exercise	146
<i>Points to Review</i>	150
<i>Exercises</i>	150

Chapter 5 Integrity Constraints

Introduction	159
Types of Constraints	160
Domain Constraints	160
Entity Integrity	161
Referential Integrity	162
Check Constraints	170
Assertions	171
Triggers	172
Triggers in SQL	173
Why Triggers Can Be Hard to Understand	175
Constraints versus Triggers	175
Other Uses of Triggers	176
<i>Points to Review</i>	176
<i>Exercises</i>	177

Chapter 6

Relational Database Design

Introduction	179
Redundancies and Anomalies	180
Bad Design	181
Another Bad Design	182
The Need for Normalisation	183
Functional Dependencies	184
Determinant	184
Functional Dependence	186
Full Functional Dependence	186
Normalization	187
First Normal Form (1NF)	188
Second Normal Form (2NF)	189
Third Normal Form (3NF)	193
BCNF – Boyce-Codd Normal Form	199
Fourth Normal Form (4NF)	201
More Normal Forms	202
Review Examples	202
Points to Review	203
Exercises	203

Chapter 7

Storage and File Structure

Introduction	205
Overview of Physical Storage Media	206
Magnetic Disk	208
Physical Characteristics of Disk	208
Performance Measures of Disk	209
Optimization of Disk Block Access	210
Tertiary Storage	210
Optical Disks	211
Magnetic Tapes	211
Storage Access	211
Buffer Manager	212
Buffer Replacement Policies	212
File Organization	213
Fixed Length Records	213
Variable Length Records	214
Organization of Records in a File	215

Sequential File Organization	216
Clustering File Organization	216
<i>Points to Review</i>	216
<i>Exercises</i>	217

Chapter 8 Indexing

Introduction	218
Index	219
Index Structure	219
Index Evaluation Factors	220
Types of Indices	220
Ordered Indices	220
Primary Index	221
Dense Index	222
Sparse Index	222
Common Access Method	223
Deletion of Data Records	223
Insertion of Data Records	224
Secondary Indexes	225
Comparison between Primary and Secondary Index	225
Multi-Level Index	226
Hash Index	227
<i>Points to Review</i>	228
<i>Exercises</i>	229

Chapter 9 Extensible Markup Language (XML)

Introduction	230
XML Data Structures	231
Output	232
XML Documents Structure	233
Hierarchical Data Structures	233
XML Data Structures	234
Parents and Children	236
XML Schemas	237
What is a Schema	237
The <schema> Element	237
Referencing a Schema	238

XML Simple Elements	240
Simple Elements	240
Trees.xml	240
XML Application	241
A Sample XML Application	241
Building XML Applications	242
<i>Points to Review</i>	243
<i>Exercises</i>	243

Chapter 10 **Advanced Querying**

Decision Support System	244
Components of DSS	245
DSS Characteristics	246
Functions of DSS	246
Why use a DSS?	248
OLAP (Online Analytical Processing)	248
Slicing and Dicing	249
Drill Down	249
Consolidation	249
Uses of OLAP	249
Data Warehouse	249
History of Data Warehousing	250
Data Warehouse Architecture	251
Components of a Data Warehouse	251
What is Data Mining?	253
What can Data Mining do for you?	256
Reasons for the growing popularity of Data Mining	256
Tasks Solved by Data Mining	257
<i>Points to Review</i>	258
<i>Exercises</i>	258
 Appendix	 259
References	268
